

8th Annual International Congress of BioEnergetic Medicine, May 14-16, 2004 at the Rosen Center Hotel in Orlando, FL.

Life is too short to be small

~Benjamin Disreali

from „Thought of Ira Brind“

Summary:

Energy-rich biophysical therapies are modern tools to treat chronic disease. Both, ONDAMED and Quint use specific signals to accomplish this. Selecting the *Specific* frequency, the duration of therapy, and the area to be treated are the trick for optimal healing response.

Breakthrough in Biophysical Medicine

Two hints for your personal treatment:

If you strain your ankle, take five pearls (globuli) of Rhus Toxicodendron C30 3 times per day together with 5 pearls of Arnica D200.

Both the hematoma and the pain will cease in a short time.

If you burn yourself, take 5 pearls (globuli) of Cantharis C30. Take them and stir 20 pearls into a glass of water. Let them dissolve well by using a plastic spoon (not a metal spoon). Then take a sip every 10-30 seconds. In 30 minutes you will be pain free and there will be no blister. This is guaranteed. I do not know of any other therapy capable to achieve that. How could something, close to nothing, such as homeopathic substances evoke a healing response?

The Adey Window

W.R.Adey from the University of California did research on the calcium influx into the brain cells of a rabbit.

Only a very small stimulus would evoke resonance at the cell wall and initiate calcium influx.

He proved, that weak impulses would jump start life energy. Middle-strength impulses would support life functions and strong impulses would block or destroy life functions.

We know how to determine the adequate weak substances for burns and strains. But how can we determine the effective

weak healing substances for each patient and disease?

Unfortunately, in most cases, we do not know the effective healing substance.

Consequently we must produce it. Both the ONDAMED and the QUINT System help us to determine the desired weak healing impulses.

Ladies and gentlemen,

When I meet a new patient I have to answer the critical question: what is the cause of the disease?

During the sixties, the former Dean of Harvard University would write the number 16 on a black board during his formal welcome to new students. He explained to the stunned audience: „This is the number of diseases, of which causes are known and healing methods are known. All the other thousands of ailments are in the realm of the obscure. Maybe, one of you will bring some light into one of these secrets during his medical life.“

We all know how difficult it is to answer the question of the root cause of a disease. Is it ever possible?

After 30 years as a physician I know. Without using Biophysics and Functional Medicine- which is known as „Alternative Medicine“ to most of you, it will be difficult, if not impossible, to answer this question.

Today I want to show you that by using a combination of several methods (which incorporate both diagnostics and therapy) we will be able to succeed.

Although there will still be a lot of questions remaining unanswered, we will be able to do a lot of good to the patients.

About one hundred years ago, the discovery of X-ray started the era of physics in the medical world.

Another electromagnetic method which had been postulated to be nonsense by experts is now part of our daily medical routine since 1970: Magnetic-Resonance-Imaging (MRI).

In 1979, Jerry I. Jacobson used extreme weak electromagnetic fields (10 pico Tesla) to treat a variety of diseases including cancer. Jacobson`s Resonance is based upon Einstein`s „Algebraic-Field-Theory“ and is combining electricity, magnetism, and gravity.

For 30 years innovative biophysical therapies such as BIORESONANCE, QUINT, and the ONDAMED are being developed.

There is a growing body of knowledge, that treating health disorders or diseases will be difficult if not impossible without additional energy.

The necessary energy can be supplied by electromagnetic waves.

Consequently several treating devices with a magnetic-field component have been invented.

The universal importance of the electromagnetic field for life functions has been understood by several physicists (Becker/Selden) and Burr at Yale University.

It is empirically known, that electricity plus magnetism is outdated simple Bioresonance (Ludwig, Karz).

Electromagnetism – as a life force – is used in a sophisticated way by the ONDAMED therapy. It produces specific single frequencies to approach the patient and diseased

tissue. It is even possible to detect the blocked or inflamed areas of the diseased body, which can be treated with these frequencies (Binder, Nogier).

The use of physics in medicine, especially Bioelectromagnetism, began in the middle of the previous century and has been evolving into the therapy of the 21st century. There is a growing body of knowledge: theoretical, experimental, and clinical. About 10.000 publications are now available worldwide, including from Russia and India.

Above that, physics has provided complete new understanding for the 250 year old homeopathy.

„Revolutionary new knowledge will not convince everybody,“ says Max Planck, „ but they, who do not understand them, will die out.“

Kinesiology, a therapeutic giant, is working with energy fields. Callahan proved his TFT (Thought Field Therapy) to be by far superior to conventional psycho-therapeutic methods, which have tried fruitlessly to treat phobias for years.

The 30 years of my work as a physician have convinced me, that biophysics such as HOMEOPATHY, BIORESONANCE, QUINT SYSTEM, and the ONDAMED are essential healing tools.

Today, I want to introduce two methods: ONDAMED and QUINT as they are used in daily practice. Thus more people and piers will pay attention and interest will grow for these methods, effective both in diagnostics and in therapy.

However, I want to leave it to the experts like Popp, Ludwig, Köhler etc. to explain the theories of the workings of biophysical methods.

Which data do we collect in case of disease?

For example

57 years old lady with idiopathic biliary cirrhosis with abdominal fluid

Blood Work:

- Lipase 668 U/l (up to 60)
- Amylase 238 U/l (up to 100)
- AP 375 U/l (up to 104)
- Gamma GT 170 ,
- GOT 63, GPT 45.

Electrodermal Screening according to Schimmel:

- Liver-cirrhosis (acute and chronic)
- Spleen (chronic)
- Colon (chronic)
- Milk-Intolerance

NOSODES from Staufen Pharma:

- Aerobacter/Coli, Atrazine, Liver-Cirrhosis, Salmonella TP, Scarlatinum, Toxoplasmosis.
 - Morbillinum, Hepatitis, Rubeolae, Conjunctivitis.
- The first three have been key toxins
(Schimmel)

ONDAMED:

Frequencies

- right frequency 3.866,1 Hertz (spleen/pancreas)
- left frequency 7,512,0 Hertz (stomach/spleen/pancreas)

Focalized Inflammatory Sites

- left ear, total lower abdomen, bladder, areas below both scapulae, both kidneys

Microorganisms:

- Helicobacter, Mycobacterium Phlei

Programs

- Nr. 78 Liver/Bile, Nr.63 Chakra 3, Nr. 33 Psychovegetative

Neural-Therapy-Point

- middle area of the bladder on lower abdomen.

Neural-Kinesiology (Klinghardt):

Toxoplasmosis is opening the regulation.

Rating all these data, we postulate an infection with a variety of microorganisms in the spleen/liver/pancreas. Using several diagnostic methods will produce different results. However, toxoplasmosis is opening regulation. Let us look at some more diagnostic data for this case before entering therapy:

QUINT System:

- Leading is the liver, the dysbiosis, and the bacteria.
- Splitting of bacteria: Staphylococcus and Clostridium tertium.

HOMEOPATHY QUINT:

- Lycopodium D200, Ammonium carbonicum D400

NOSODE VECTOR QUINT:

- Leading Nosode-vector is the Bacterial-Vector, on position 6 of the Five-Elements-System (smaller intestine/heart).

TOTAL VECTOR QUINT:

- On position 4 of the Five-Elements-System (colon/lung)

ORGAN VECTOR QUINT:

- adrenal-medulla

HIGH POTENCY VECTOR QUINT:

- Kalium (harding of tissue), Titan, Tantal.

ANALYTIC KINESIOLOGY:

- Spleen/pancreas-- functional impairment
- Liver functional—impairment

Causes

- Arsenic (heavy metal)
- Gardnerella vaginalis
- Haemophilus influenzae serotyp B

The Therapy could be:

treatment with specially tested prescriptions

Nosode-Vector-Prescriptions, Vector-Prescriptions, High-Potency-Vector, Neural-Therapy

Bioresonance, Homeopathy, ONDAMED Therapy etc.

Why ONDAMED?

There are several reasons:

1. The method is simple and effective
2. No EDS (Electroacupuncture) testings
3. Supply of energy by electromagnetic frequencies. Even if you are accurately testing a variety of medications through the acupuncture points, the lack of energy in the diseased organ may make the patient insufficiently respond. How can I build up the weak energy field of the diseased organ?

Therefore we need Biophysics. We need a system, which first can supply specific electromagnetic energy, and second, is capable to detect blocked focalized inflammatory sites. ONDAMED can do that.

The optimal frequency for the energy supply differs from patient to patient and from organ to organ. Over decades it has been found, that diseased tissue has to be addressed individually. The key for that frequency is the electromagnetic field of each organ.

Physics has understood, that the electromagnetic energy field is basis of life. Consequently this energy field can be influenced by induction.

In 1996, the MIP (Massachusetts Institute of Physics), may be the number one in the United States with published research data about the electromagnetic emissions of organs. Each organ has a specific EM emission. Consequently it will also resonate to certain frequencies.

Therapeutic systems such as QUINT and ONDAMED are capable to provide those specific frequencies. Today, both could be regarded as important innovations. However, both work very differently from each other.

The QUINT, working with 20 to 200 micro-Tesla, provides resonating frequencies by accurately tested signals of vector-prescriptions (medications) in combination with unspecific Schumann waves as both energy and carrier for those signals.

Schumann waves are electromagnetic waves in between the surface of the earth and the ionosphere. They are vital for living species. However, they represent no specific signals.

QUINT „injects“ the tested prescription signals by using a programmable box, called QUINT BOX. It is the size of a cigarette box.

It transmits both the energy of the Schumann waves and the medication signals. As vectorized signals, this method takes time and requires special skills, which are not quite easy to learn. However, it is very effective. It would be wise to invest that training.

ONDAMED´s advantage is it´s genial and simple method. The combination of specific frequencies and Pulse-Reflex is the key for successful diagnostics and therapy.

ONDAMED means "medicinal wave". It is an induction rebuilding (harmonizing) the electromagnetic life field of diseased tissue. It does that by specific waves applied to non-functional parts of the body.

Both the blocked tissue and the necessary specific induction-wave are found by a simple pulse test in cooperation with the ONDAMED machine. The wave range is 0.1 to 31.835 Hertz and 0.5 to 60 milli-Tesla. By producing a specific, single wave, for each individual patient, the system works very powerfully and effectively.

ONDAMED´s frequencies are harmoniously arranged in 18 octaves as our tone-spectrum.

They also relate to the colour-spectrum from red to purple.

ONDAMED finds blocked tissues, which means, the sites of the body which need to be treated to improve energy flow, and it finds the necessary specific induction waves by a simple pulse reflex.

It works with pulsating waves. Thereby higher EM induction can be provided, and the tissue can „swing“ and react. Living tissue needs to oscillate between Yin and Yang. This is equivalent to better breathing, eliminating of toxins, and elimination of acids. Rigidity is favouring fermentation and would be adverse to our life functions.

Pulsated waves are of advantage in the lower frequency range, because otherwise there would be no induction.

Simultaneously they also introduce a part of the higher frequencies.

Pulsated waves contain the highest frequencies. Sinus-waves do not contain higher frequencies.

The more the wave separates from the Sinus-wave, the steeper the impulse, the higher the higherfrequencies.

The colour is relating to our sensory organs only in the 43. to 44. octave.

Of course, lower frequencies also relate to color. However, this phenomenon is not visible.

The relationship of lower and higher frequencies can provide a healing power of colours in all ranges.

Special brain programs eliminate pathological impulses stored in the CNS. 172, well designed programs are effective for a wide spectrum of health disorders. Other frequencies of the system work against viruses, bacteria, and parasites.

It is essential for both, symptomatic and systemic treatment. However, it follows strict rules if you want to counteract chronic illness.

ONDAMED is a must and a basic tool for any therapist in the 21 century.

The field strength is important for treating osteoporosis as for all other conditions. Distance of electrodes to the tissue to be treated can be found by pulse reflex.

Also the geometry of the field is important and is depending upon the geometry of the applicator. This can considerably improve the local effectivity. As known in Neural Therapy

we want to address the optimal area.

Other than a tablet, which will be swallowed above and will affect the whole body, Neural Therapy is focussing on a very distinct point of the body. The effectivity of Neural Therapy is beyond doubt.

However, finding the distinct point is crucial and exactly that is possible with the ONDAMED. Therefore ONDAMED could be called „Electromagnetic Neural-Therapy“ Using the patient-specific-wave for each patient, instead of a „wave mixture“ the system works very effectively.

Non specific waves would not be capable to find neither the point nor a focalized inflammatory site.

Special programs for brain functions can eliminate pathological impulses stored in the central nerveous system.

Chronic disease will hardly be successfully treated without including the CNS into therapy.

Frequencies below 14 Hertz are favoured for brain therapy because this organ is working in lower frequencies.

A broad spectrum of health disorders responds to 172 composed programs. Other frequencies are of value against microorganisms.

ONDAMED is essential for acute and systemic therapy. However, strict rules have to

be obeyed, if you want to treat chronic disease e.g. the problem must be vectorized. Focus-search is a domain of the ONDAMED. Combining the method with the Pulse Reflex or Kinesiology, the crucial point can be located and treated.

This is a wonderful tool for Neural-Therapy since it is depending upon the one distinct point to be treated.

Why do we highlight the specific frequency?

Here are some fascinating research results: LeDoux hypothesized in 1989, that psychic disturbances lead to irreversible disturbances in the amygdala of the brain region. He visualized the brain as an engram, which refers only to specific brain structures. Pribram (1962, 1969) replaced this model with a holographic model. In his opinion, the brain forms a vast interference pattern when we remember something or when we listen to music (in F.P. Gallo 1999, page 33).

Life processes appear on the basis to be connected with frequency patterns and interference patterns. Research of Becker (1990) and Becker & Selden (1985) showed, that in bone fractures, an "injury current" appears on the fracture point.

ONDAMED has been very effective osteoporosis cases (Kessler, et. al.)

Further evidence for a biologic-electric life basis was presented by research conducted by Marsh and Beams (1952). They discovered a polarity in the head and the tail in flatworms. When changing the polarity, the head grew in place of the tail. Louis Langman examined more than 120 women with cervical cancer and found, that 96% of these women had a negative current charge on the cervix. In contrast, 95% of healthy women had a positive current. The theory that negative tissues could be treated by means of electric current, was proven by Rife in the 1930's, however, through unfortunate circumstances this theory was never pursued (Lynes, 1987).

Another very interesting example of the hypothesis that electro-dynamic fields -the matrix - build the "form" of the body, was presented by Becker & Selden (1985). They found out, that the frog contrary to the salamander could not re-grow an amputated leg. When they introduced a negative electrical field on the amputation stump, the frog was also able to re-grow a leg.

Burr (1972) started to measure electrical current of all different life forms (trees, mushrooms, people, etc.) at Yale University and called them the "L-Fields" or "Life Fields". He discovered that these fields changed with the moon cycles, the sunlight, the darkness, and magnetic storms. Today, modern instruments have proven the existence of the so-called "L-Fields" (in F.P. Gallo, 1999).

The enormous therapeutic influence on diseased human tissue that modulated frequency patterns and electro-magnetic frequencies (ONDAMED) has, was first proven with Digital Infrared Thermal Imaging by Fulford and Löprich et al. in 2002.

The current improvement that ONDAMED achieves with the regulatory behavior of functional blocked organs was proven with the computerized "Segment Electrograph" (Kessler et al., 2002).

In the area of traumatology, ONDAMED has proven effective, as the following case shows. A 67-year old male, pain and swelling in the left arch after a 100-pound box fell on his left foot 2-3 months ago. After the ONDAMED Therapy, the patient had great relief and the thermograph showed normal.

Treatment of Osteoporosis shall be our show-picture for rebuilding the energy field:

Today we are able to treat Osteoporosis effectively. The patient will be pain free.

Osteoporosis:

The ninety year old lady was held together by the stays of her corset. She could not walk. Her kinfolk brought her to the clinic. She was in pain. Within 10 days her pain ceased dramatically. After 14 days she could walk with a walker. She became pain free.

Even if ONDAMED would only be used against Osteoporosis, it has proved it's value.

There are fixed frequencies for this treatment, which are programmed for the left and right side of the body:

~Right frequency: frequencies are running from 8 Hertz to 101,59 Hertz

~Left frequency: 450,14 Hertz
Intensity: 8,0

~Duration of therapy will be tested individually by Pulse Reflex or Kinesiology (mostly 40-60 minutes)

ONDAMED can be used for many different health problems:

Dental problems

ONDAMED is one of the finest options to treat an unhealthy tooth.

I had numerous cases of severe dental pain with loosening of the tooth stability.

Patients hadn't even been able to close their jaws tightly. It is not known so far why a tooth all of a sudden is giving up.

One answer, for certain, is the impaired electromagnetic field, due to an energetic yin-yang dysbalance.

What is the meaning of the found frequencies? How do they dominate the therapy?

Diabetes mellitus:

72 year old obese lady with diabetes type II and lower back pain:

Right: 3158,4 Hertz (liver/lung)

Left: 383,56 Hertz (liver)

Picking up the frequencies at the site of complaints will change the frequencies slightly. However, they seem to be more accurate there.

Frequencies picked up at the painful lower back area:

Right: 6501,9 Hertz (lung)

Left: 12 274 Hertz (Liver)

As you see, we got more distinct frequencies relating to the organs to be treated that way.

Picking up from the neck will be the usual procedure, since that area seems to represent a major systemic indicator of the lymph.

Finding clearly distinct and organ related frequencies will determine the therapy.

These found frequencies are also representing the necessary healing frequencies.

The determined frequency shows us which organ would be primarily responsible for the health problem. This will enable us to prescribe additional medication and/or homeopathics for that organ.

However, there are successful therapists claiming, that ONDAMED does not need additional medication (Karz).

IRIDOLOGY:

Weak stroma in the pleural sector. Spreaded rusty-brown pigments everywhere indicating intoxication and acidity of metabolism.

VRT ,EDS Electrodermal Screening of Medications:

Ranunculus OPLX, Hepar sulfuris D12, Calcium

Fluoratum OPLX, Quassia Spl.

These medications relate to chronic lung infection, the liver, and rheumatic complains at the lower back.

Neural-Therapy:

ONDAMED's domain is the detection of distinct points to be treated with Lidocaine, Procaine, etc.

First:

you would detect the blocked inflammatory sites by Pulse Reflex and Frequency.

Second:

Pulse Reflex will then differentiate between all found locations, where we would have the heaviest pulse response.

Third:

you could use Kinesiology, whether the found point would be the optimal one for Neural-Therapy. If not you would ask all other points step by step to find an answer for the best point.

If you prefer to just treat the point with ONDAMED it will also be acceptable and could be beneficial.

Hearing Trauma:

The 36 year old American lady had suffered from a left ear hearing loss after a multi-trauma by motorcycle accident.

Years later one of her scars on her left foot had been treated by frequencies of ONDAMED. The scar opened up and produced a blackish, grainy discharge, and the ear also opened up. Ever since she could use the telephone receiver for her left ear.

ONDAMED is based on a law of physics, that the electromagnetic field is representing the matter of the bodymatter of our body is our body. Consequently it's distinct, resonance- frequencies re-organize the energy field of the organs. Thus, fractally, the energy field of the body is restored.

Fracture of Calcaneus:

A young fire fighter was disabled for three months after jumping off a ladder and breaking his heel. The heel (calcaneus) does not have own vessels but is nursed by diffusion of other vessels. Therefore this bone fracture usually is a nightmare for the patient and the therapist. After two therapies, with the ONDAMED bone healing program, he went back to work.

Vertebral Fracture after falling off a stairs:

It is interesting, that an optimal healing impulse requires a cushion between the tissue/area and the applicator in order to lower the field strength.

We did this both in cases of Osteoporosis and bone fractures such as a Lamina Fracture Th 6-8 of a patient who fell off a marble stairs.

ONDAMED Frequencies against microorganisms:

Fibromyalgia:

45 year old American with multiple muscle pain. There was a positive lab test for Herpes 6. ONDAMED does not offer a program against Herpes 6, but we tested the program for Herpes 2 together with other programs. Some days later he developed a huge bulky swelling at his neck which opened up discharging pus. Simultaneously his rheumatic pain decreased remarkably.

Biophysical Medicine is generally focusing on and improving two issues:

1. Improving of response of the patient to therapy.
2. Quality of regulation of the organs shall be improved. Organs, not regulating (working) optimally would steal energy from other organs. Consequently healing would be doubtful.

Despite of that, Biophysics today, is a unique tool for functional diagnostics.

For Instance:

Suicidal Depression and non-responding to therapy

70 year old lady with severe depression and recurrent suicidal attempts:

Unsuccessful medications in the past:

Tavor, Doliten, Agiopten, Insidon, Zypuxen, Quilonum, Aponal, Amitriptylin, Lorazepam, Trevilor, Maprotilin, Cipramil.

Right Frequency: 2048.0 Hertz (heart)

Left Frequency: 5160,6 Hertz (Circulation)

Blocked inflammatory sites: Occiput and total lower abdomen

Microorganisms:

214.3 Leptospira interrogans

103.3 Clonorchis sinensis

107.4 Fasciolopsis

211.2 Escherichia Coli

219.2 Shigella flexneri

ONDAMED diagnostics is proposing an auto-immune-inflammation of vessels. The causal factors seem to be both parasites, bacteria and hormonal dysbalance.

VRT (Electrodermal Screening, Schimmel) supports that:

- Both, liver and intestine are infected by parasites and bacteria
- Leptospirosis seems to be leading. As a spirochetal infection, it will affect the CNS (central nervous system).

Further differentiation of the auto-immune-process has been provided by the QUINT system. Leading was: Hypothalamus Autoimmune, Acoustic Nerve, and the Adrenals

ONDAMED detected the main focus at the occiput in the area of the brain stem.

Clonorchis sinensis belongs to the Trematodes, and as a blood sucking liver fluke it is living in fish. Thus it will be eaten by carnivores. It is living in the bile ducts and rarely in the pancreatic duct.

E.Coli and Shigella also propose an infectious cause and are pointing to the intestine as the source for the liver impairment.

Thus the pathogenesis of this disease could be explained by infection with multiple microorganisms. This may have led to auto-immune-reactions in the vessels, the CNS, and the bile system. The gall meridian is in close connection with the parietal brain resulting in a severe brain dysfunction.

Further use of the QUINT is revealing more details, which are contributing to the picture:

The Total Vector is projecting on 4 of the Chinese Fiv-Element-System (colon/lung)

The Organ Vector is projecting on the thyroid (circulation and triple warmer meridian belong to each other in Chinese Medicine)

Vectorized hormonal testing revealed: both DHEA and Pregnenolone dysbalance.

The CNS (central nervous system) is affected by autoimmune reactions in the hypothalamus and adrenals.

Intoxication with Arsenic (often found in infections of the mucosa with microorganisms and parasites).

Other factors: milk intolerance, amalgam toxicosis, toxicosis with radionuclid Na 22.

The High Potency Vector had four elements: Terbium (endless tape grinding down the intellectual substance), Hg (drama of the unwanted child), Ruthenium (frustration and overworking), Sulfur (doubt and brooding).

ONDAMED programs for this condition:

Nr. 6 Liver/Bile/Intestine
Nr. 24 Psychovegetative
Nr. 44 Theta-Wave
Nr. 64 Chakra 4
Nr. 62 Chakra 2
Nr. 95 Thymus Activation
Nr. 131 Blockage Head Area
Nr. 72 Detoxification
Nr. 88 Hormonal Balance
Nr. 15 Revitalization of the Plexus Solaris

ONDAMED found a point for Neural Therapy in the area of the gall bladder, which was treated with lidocaine.

Additional Therapies:

- Nephrorella-Algae, DMSA and Calcium EDTA for heavy metal detox
- Stool autovaccine (Dr. Ernst in Leer)
über das Labor Dr. Ernst in Leer.
- Homöopathics: Ignatia D1000 and Regenaplexe 1e, 23e, 25b, 35e.

QUINT System

This method does not determine the needed specific signals through pulse reflex, but instead tests medications using acupuncture points. It relates to the Chinese Five-Element System.

Frequencies of trace elements, orthomoleculars, homeopathics, aminoacids, plants, hormones etc. will be „injected“ electromagnetically by a carrier (Schuhmann waves) into the body.

A short introduction:

Quint means „5“ and relates to the Chinese Five-Element Theory. TCM (Traditional Chinese Medicine) believes that the energy flow must be equally distributed from one organ to the other.

Dysbalance would mean „polarisation“ of energy or disease.

Both energy flow and energy control between the organs is regulated by the Five-Element-System.

Man is healthy, if all five elements are in an energy equilibrium.

The organs are represented by the layer of 5-elements.

Energetic therapies such as Bioresonance, acupuncture etc. would approach this one level.

QUINT (Steiner) has acknowledged 5 additional levels, which correlate with the 6 dimensional world(?) system of the physicist Burkhard Heim. The three levels of space and the fourth level, the time, are complemented by two other levels: the organisation, the fifth level, and „what is to be organized“, the sixth level (Heim).

QUINT is integrating this proven fact (DESY) by adding the

2. level of the connective tissue
3. level of the vegetative nervous system
4. level of muscle control
5. level of sensory organs
6. level of the psyche (ego)

These levels are testable and reproducible through new acupuncture points the „Holopathy Points“. Interestingly certain plants, minerals, medications, or gems, all relate to one of these levels. This will produce specific prescriptions for each level. A patient with glaucoma, for instance, will respond to medications resonating with the 5. level, the level of awareness.

QUINT provides over 300 ready to use prescriptions which contain nosodes, homeopathics, orthomoleculars, plants, aminoacids, gems etc.

Bladder Carcinoma

58-year old male patient with beginning bladder cancer for two years, heart arrhythmia, chronic pneumonitis, skin fissures in between toe 4/5, and loss of smell. The Total Vector of all 6 levels pointed to position 2. Thus the necessary therapy has been clearly determined.

Vector on 2 indicates:

1. Organs: Liver/gallbladder-system are the cause (patient had unclear liver swelling 30 years ago). Remark: Iridology showed a „mixed iris“, which is pathognomonic for the liver.
2. Connective tissue : The blood needs to be treated
3. Vegetative nervous system : Sympathic/parasympathic system have to be treated.
4. Muscle control: Self fulfilment/being hurt.
5. Awareness: Smell sense has to be treated.
6. Ego: Being emotionally hurt is the leading structure of the personality

Proceeding for Total Vector 2:

1. EDS testing of the proposed homeopathics for the liver/bile: Lycopodium D1200 This substance also tested against heart arrhythmia, against the chronic lung infection, and against the bladder.
2. EDS testing of the proposed - 300 ready to use – ATK-prescriptions (aminoacid-trace element-komplex) against Total Vector 2. The found medications must also balance the heart, lung, and smell senses.
3. EDS testing of the proposed HKS medications (homeopathic-komplex-steiner). The found complexes must also balance heart, lungs, and bladder. ATK 08 (Symbiosis), ATK 16/1 (Parasites), ATK 04 (Focalized infections, free

radikals, autoimmune-reaktionen), ATK 51 K (Kalium), ATK 55 Zn (Zink), ATK 61 (fatty acids), ATK 103 (duodenitis), ATK 06 (skin fissure tea), ATK 13 (arrhythmia), ATK 19 (liver, kidney tea)

There are more important and independent vectors, which are necessary for treatment and which have to be tested:

1. The *High Potency Vector*. It works on all 6 levels. However, the psyche is treated most. It takes advantage of the table of elements and uses the elements, which have been tested to be beneficial for the patient. The elements are used in high potency D20.000. The found elements will resonate to vector 2. In this case we found: Gallium, Zink and Cerium.
2. The *Nosode-Vector* of the *Reaktional-blockages pointed to 2* (liver/bile) . This vector prescription is highly active for treating the psyche.
3. The *Food Vector* pointed on 4 (lung/colon)
4. The *Organvector* pointed to 4 (lung/colon)
(2,3 and 4 are also caled „system vectors“)
5. The *Bacterial-Vector* pointed to 6 (heart)
6. The *Fungal-Vecor* pointed to 6 (heart)
7. The *Heavy Metal Vector* pointed to auf 6 (heart)
8. The *Vector of the Radionuclides pointed to 4* (lung/colon)
9. The *Vector of Transmitters/cell phone etc.* pointed on 6 (heart)

The following therapy was:

Programming of the 5 programs on the Quint Box.

1. Program E: VT Programm 900 could be used during the daytime to boost the energy level of the patient. This will improve the efficacy of other therapies, such as High Potency Vector, Noseode Vectors, Reactional Blockage Vector, Full Vector Therapy etc.
2. Program A: Patient specific prescriptions .
3. Program B: Vector-therapy including area vectors of the subconscious.
4. Programm C: High Potency Vector (psyche)
5. Programm D: Nosode- and System-vectors.

Ovarial-Carzinoma:

This was an interesting case to blance the hormonal situation of a 59 year old lady with MMT. We tested the hormones against the Reactional Blockages and found progesterone to be the essential key hormone. Her former spit tests all revealed a lack of estrogene. Consequently she took estrogene for ten years, which not only was not tolerated well but also grew her ovarian tumor. We gave her 500 mg progesterone per day and brought her into remission.

Back to the ONDAMED

Thermography has shown the efficacy of the ONDAMED in cases studies in the United States. Computerized Segment Electrogram, another objective method documented spontaneous improvement of regulation after ONDAMED . (Fulford, Kessler et al.).

Frequencies below 10 Hertz play an important role for treatment since the central nerveous system is working in that range.

In the 60ies, Paul Nogier, the inventor of French Ear Acupuncture and the RAC, a pulse reflex, postulated, that healing will not happen, if the responsible blocked areas will not be found and treated.

Detection of these blocked sites will forward Neural Therapy in a new dimension.

ONDAMED uses frequencies as a mathematical pattern such as tones. They are repeated in each octave.

In other words: if you double the frequency, you higher the harmonious frequency of the octave. Healing frequencies are given as electromagnetic waves.

Most diseases are anchored in the CNS (central nerveous system). Therefore both, the ONDAMED and the QUINT incorporate therapies for the brain. ONDAMED uses frequency patterns of the brain for therapy. Quint uses vector prescriptions and the High Potency Vector of tested elements of the table of elements.

Daily clinical work has shown, as pointed up by Köhler, that successful therapy also depends largely upon the area to be treated.

United States Case studies clearly documented fascinating results by detecting those areas by pulse reflex.

However, there are other avenues, as shown by Karz, to perform successful treatment.
